FAST SHELTER ANNOUNCES NEW SEALED LINE OF TENTS.

The premier manufacturer of inflatable shelters broadens its extensive line of rapid set up tents.

Phoenixville, PA August 9, 2010

FAST Shelter is pleased to announce an addition to its selection of inflatable tents with the introduction of its newest technology, Sealed. While FAST Shelter's standard design involves the use of a constantly running high pressure blower, the new Sealed design requires filling it only once with air and then closing the inflation valve. It will remain rigid and structurally sound for several days before a topping off of air is required.

Inflation of the new Sealed shelter is accomplished by either using the provided electrical high-pressure pump or a compressed air bottle. The primary advantage of the Sealed shelter is that it does not require a constant source of electricity to remain inflated.

Inflation is quick, under three minutes. Deflation is accomplished by opening the two deflation ports and is completed in five minutes. The shelter is then rolled up and packed in a heavy-duty canvas bag for storage.

After inflation, the shelters, measure 10'by10', 10'by15' and 10'by 20'. Inside height is 8 feet. When packed away, the Sealed shelter takes up about as much space as a 55 gallon barrel which makes the shelter very portable.

Primary users of the new Sealed shelter are emergency services organizations such as fire, rescue and police. Disaster response and military applications are also a prime operator.

Marketing Director, Brendan Howard, relates that FAST Shelters are operating internationally. FAST Shelters are in the oil fields of Kuwait with their fire service, in the United Kingdom with windshield repair technicians, protecting soda

blasting paint removal operations in Australia, and in Manitoba, Canada, covering wind turbine repair.

Mr. Howard continues, “Our largest market is here in the United States where they are used for emergency services such as fire and police activities, auto refinishing, building maintenance, hot tub installations, and athletic team covers. We also provide custom designs for unique situations”.

With the addition of the Sealed design, FAST Shelter has expanded its product line to capture markets where a high quality, temporary enclosure is needed but constant supply of electrical power is not available.

FAST Shelter is a subsidiary of Sky Signs Balloons Ltd. Photographs and specifications can be found at www.fastshelter.com. Please address your questions to info@fastshelter.com. The phone number is (610) 415-0225.
